Maintenance Log -- P. Ostrander

Found: engineering, DC 12.

Day 58 -- Helm running hot on every correction. Logged it, nothing conclusive yet.

Day 60 -- Same as yesterday, worse. Coupling shouldn't need this much coaxing.

Day 61 -- Helm's been reaching for nothing three days running now. Coupling's hot to the touch even dead. Nothing left to do about it from down here. Reported to the Captain.
